

Michael Flynn

michaelflynn840@gmail.com | (315) 521-5418 | Canandaigua, NY

OVERVIEW

Machine Learning Engineer with experience training, slimming and deploying models to embedded devices (Versal, Jetson/TRT, Hailo, DeepX). Skilled in developing scalable data and training pipelines systems using MLOps tools like DVC, MLflow, Hydra, and Ray, lightning. Background working with CNN and YOLO models as well as CV pipelines in OpenCV.

EDUCATION

Georgia Institute of Technology

Sep. 2026 - current

OMSCS

Machine Learning Specialization

University of Rochester

Aug. 2022 – May 2025

B.S. Computer Science

Cumulative GPA: 3.7/4.0

EXPERIENCE

Embedded AI/ML Engineer

Mastodon Design | Dec. 2025 - current

- Designs and implements scalable RFML training and deployment pipelines using MLflow, DVC, Hydra, Ray, PyTorch lightning and ONNX.
- Implements embedded inference runtimes (C++) optimized for throughput, latency, and hardware constraints.
- Utilizes Neural Architecture Search (NAS) and transfer learning to optimize model architecture, balancing embedded constraints with model performance.
- Profiles NPU accelerators for throughput latency tradeoff, thermal and power properties.

Research Assistant

University of Rochester | June 2023 – Dec. 2024

- Designed and studied a novel subset scoring function based on group gradient similarity.
- Trained and evaluated CNN and SVM models using PyTorch and scikit-learn.
- Conducted literature reviews on slice mining and dataset summarization.
- Designed workflows to automate experiment execution and results collection/visualization.

Software Engineer Intern

Novanta | June 2022 - Aug. 2022

- Contributed to a low-code machine vision platform using PyQt5 and OpenCV.
- Designed ETL pipelines to curate and preprocess image datasets for computer vision applications.
- Developed embedded stepper motor control software for automated image acquisition.
- Participated in an agile development environment.

PRESENTATIONS

- *Gradient Approximation Based Slice Finding for Debugging Machine Learning Models*, MIT, 2025
- *Core Sets for Training Machine Learning Models*, University of Rochester, 2023
